PROFILE SUMMARY

DevOps Engineer with hands-on experience in Version control system with Git & Git-Hub, containerization using Docker & Docker-Compose, CI/CD automation with Jenkins. Container orchestration with Kubernetes, AWS cloud infrastructure, and monitoring with Prometheus and Grafana, focused on building reliable and production ready DevOps workflows

EXPERIENCE

Aries

DevOps Engineering Intern

Nov 2025 – Jan 2026

Ahmedabad, Gujarat

- Designed a centralized observability stack using **Prometheus, Node Exporter, Promtail, Loki, and Grafana**
- Enhanced real-time **system visibility** across multiple services, improving incident detection and response efficiency
- Collaborated with backend team to define alerting thresholds and improving on call response workflows
- Built custom dashboards and developed automation focused CLI tools in **Go** to streamline API specification and documentation workflows
- Reduced manual effort in API maintenance and documentation by **~50%** through automation

PROJECTS

Microservices Observability Stack

- Built a full observability setup for distributed microservices using **Prometheus, Node Exporter, Loki, Promtail, Grafana, and Alertmanager**
- Deployed the entire stack via **Docker Compose** with resource limits and health checks on all monitoring components
- Configured **Alertmanager** with alerting over email and defined alert rules for CPU, memory, and service health
- Reduced issue detection time by **~70%** and improved incident response speed through proactive monitoring

Jobtracker

- Built a **4** service application with React, Go, MySQL, and Nginx, **containerized** with **Docker** to create a consistent local development and deployment workflow.
- Automated** the **CI/CD pipeline** with **Jenkins** to build and push **4 container images** to Docker Hub and deployed the latest application version to **container orchestration** tool **Kubernetes**.
- Configured **Kubernetes Deployments** and Services for the full stack and validated the setup on **Minikube** to simulate a production style orchestration environment.

SKILLS

Cloud & DevOps: Git, GitHub, Docker, Docker Compose, Jenkins, Kubernetes, AWS

Monitoring & Observability: Prometheus, Grafana, Loki, Alertmanager, Promtail, Node Exporter

Programming & Scripting: Go, Python, Shell Scripting

CS Fundamentals: Computer Networking, Operating Systems, Linux

EDUCATION

B.C.A (Hons.) – Specialized in Cloud Computing

Marwadi University

Higher Secondary Certification

St. Mary's School

CGPA: 9.22 | 2022 – 2026

Rajkot, Gujarat

79.7% | 2021 – 2022

Gondal, Gujarat

CERTIFICATIONS

- Google Cloud Engineering
- AWS Cloud Practitioner
